10/05/04

"Public and private companies are entering a new era where operational risk and compliance management are merging as requirements for improved corporate information privacy and security, operational transparency and financial disclosure are becoming core drivers of enterprise software and services demand. Global demand for compliance management capability is driving most organizations to seek and deploy integrated document management, workflow, secure communication, activity monitoring, analysis, reporting and risk management tools."

- Lane Leskela, Pavilion Chair and VP Research Director, Gartner

Leading Gartner Analysts:

Compliance and Corporate Governance (COMPL)

Corporate Governance is top-of-mind. High profile institutional scandals in corporations, non-profits, and government demonstrate the results of poor governance. Compliance within the ever more complex regulatory environment threatens to make good governance very expensive. However, reasonable IT investments in compliance and governance are required to adhere to public expectations. If targeted properly, these investments can also lead to improved corporate performance.

Lead Presentation:

The Compliance and Corporate Governance Scenario

Session:

- COMPARE V.2: A Corporate Compliance Roadmap for All Seasons
- Governance and Corporate Performance Management
- Selecting the Right Architecture, Technology and Vendors for Compliance
- Tutorial: Compliance Management Best Practices
