

Gartner Identity & Access Management Summit 2013

11 – 12 March 2013

Park Plaza Westminster Bridge, London, UK

gartner.com/eu/iam

HOT TOPICS

- *Future IAM markets, trends, and technologies*
- *How IAM can support cloud, social, mobile and data*
- *Mobile computing security*
- *IAM program maturity*
- *Identity and access governance*
- *The economics of IAM — overall value to the business*

EARLY-BIRD SAVINGS Register by 11 January 2013 and save €300

Pragmatic Futures for IAM: Meeting Business

TABLE OF CONTENTS

- 2 Event Introduction
- 3 Why Attend
- 4 Tracks and Keynotes
- 5 Meet the Analysts
- 6 Agenda at a Glance
- 8 Tracks A, B and C: Sessions
- 11 Tutorial, Roundtables and Workshops
- 12 Powerful Tools to Navigate Manage and Decide
- 13 About Gartner
- 14 Solution Showcase
- 15 How to Register

The Nexus of Forces – mobile, cloud, information and social – brings new challenges and new opportunities for IAM. CISOs and IAM leaders must keep sight of the needs of day-to-day operations, the demands of governance, risk management and compliance, while extending their vision to include the Nexus. And the obligation remains to deliver meaningful, business-focused results.

Our goal for the 2013 IAM Summit is to lay out the technology, tools and techniques essential to establish an efficient, effective, enabling and enduring IAM program for lasting success.

Ant Allan
Research VP,
Gartner

Karthik Cariappa
Senior Programme
Manager, Gartner
Events

GARTNER PREDICTS

By year-end 2015, one-third of major IAM consulting and system integration firms will also offer IAM as a service.

“ Very well thought out event with a first class selection of speakers and experts. An event not to be missed for those in IAM. ”

OpenAthens Product Manager, Eduserv

Needs at the Nexus of Forces

Why Attend

- Learn what will be **the impact of cloud computing, mobile computing, social networks and information** on IAM on vice versa
- Understand what the **organizational impacts** of supporting IAM are
- Prepare for the **next generation of IAM solutions** by understanding strengths, weaknesses and applicability to your needs
- Establish how to **create a more access accountable and transparent** organizational culture for your enterprise
- Discover how IAM fits within the larger context of **solving business relevant problems and positioning the business for success**
- Get advice on the **best practices for planning, implementing and managing/governing** IAM
- Learn how to **understand the maturity** of your IAM program in order to **maximise value**

Europe's most important annual gathering of the identity and access management community.

WHO SHOULD ATTEND?

Senior business and IT professionals including:

- Anyone responsible for IAM programs
- CISOs, CSOs and their teams
- CIOs and other IT directors
- Vice presidents, directors and managers of information security
- Network security managers and directors
- IT/IS directors and managers
- Enterprise architects and planners
- Finance executives and risk managers

A Plan, Manage and Govern Your IAM Program
Every program needs solid foundations. This track provides the information you need to establish a strategic vision for your IAM program and to take the steps needed to actualize that vision. We provide valuable, proven best practices around how to articulate the overall business value of your IAM program, IAM program management, how to make the right decisions about IAM initiatives and how to place IAM within the context of enterprise architecture.

B Take a Pragmatic Approach to IAM Technologies
What's really going on in the world of IAM today? What are your peers doing, and how can you make the best use of the technology that you have? In this track, we look at IAM technologies in depth and reveal how you can maximize the value of your IAM technology investment with minimum wasted effort or expense and successfully achieve your desired results.

C Get to Grips with the Nexus of Forces
Cloud, mobile, social and information are already having a tactical impact on IAM. There are a number of hot-button issues that are on everyone's minds. If you aren't thinking about these topics now, then you will be behind before you know it. But how can you separate the fact from the hype? In this track, we explore where and how IAM can support and exploit these emerging trends and technologies and how your strategic vision can reflect the Nexus of Forces.

D Complement IAM with Security and Risk Management
IAM, security and risk management are related disciplines. There are overlaps in both function and technology that must be considered to get the most out of your investment and have a robust, multifaceted approach to IAM, infrastructure protection and risk management within your organization. In this track, we explore how IAM complements and is complemented by adjacent security and risk management tools and techniques.

V Virtual Track: For IAM Technical Professionals
This year we feature a number of sessions by Gartner for Technical Professionals analysts that provide in-depth insight on the intersection of IAM with mobility, hybrid cloud, Amazon Web services and externalization.

V Virtual Track: For New IAM Leaders
In this track we focus on the topics that will be of particular relevance to new IAM leaders. What are the key management actions and technology initiatives? What are the important tactical and strategic issues?

KEYNOTES

Summit Opening and Welcome Presentation: The Socialization of Identity

Federation with business partners simplifies admin and access for their customers and workforce. But true generic identity providers have yet to emerge.

Enterprises now seek to support user enrolment and login via social networks. Will these networks become the main identity providers of the future?

Ant Allan

Guest Keynote: Why it is Now Time for Legitimate Businesses to Learn from Transnational Organized Criminals

Jeffrey Robinson is the American born British based international best-selling author of 23 books, and a recognised expert on Organised Crime, Fraud, Identity Theft and Money Laundering. A native New Yorker who has been living in Europe for 35 years, Robinson's 1995 investigative tour de force, 'The Laundrymen', uncovered the true extent of global money laundering. It is considered the definitive book on the subject, and now used in universities and law schools as a text.

Jeffrey's eye-opening presentations are brilliantly delivered with humour and his trademark New York wit. He is a total entertainer and his presentations are always well received by audiences around the world.

Jeffrey Robinson

Gartner Closing Keynote: Maverick: Kill Off Security Controls to Reduce Risk

The traditional 'control' mindset of information security cannot keep pace with technological and behavioural change, resulting in policies and technologies that cause frustration and impede agility. A new approach is required, one that recognizes how the relationships between IT, the business and individuals have been transformed irrevocably.

- Why are the status quo approaches to information security untenable?
- Does a less controls-intensive, more people-centric strategy make sense?
- What are the elements of a potential people-centric approach?

Tom Scholtz

MEET THE ANALYSTS

Gartner analysts draw on the real-life challenges and solutions experienced by clients from 12,400 distinct organizations worldwide

Solution Provider Session		
User Activity Monitoring for Early Breach Detection <i>Mark Nicolett</i>	09:45 – 11:15 Workshop: Protecting Applications and Data beyond IAM: Technologies and Processes <i>Joe Feiman, Dionisio Zumerle</i>	10:00 – 11:00 Things You Always Wanted to Know About Authentication but Were Afraid to Ask <i>Ant Allan, Trent Henry, Avivah Litan</i>
Performing IAM is Only One Prerequisite Step <i>Jules JEROME, Head of Inspection, Banque Internationale à Luxembourg</i>	11:30 – 13:00 Workshop: IAM Intelligence — How to Break Down the Myth About Identity and Access Intelligence <i>David Lello</i>	11:30 – 12:30 Identity and Mobility <i>Trent Henry, John Girard, Dionisio Zumerle</i>
Solution Provider Session		
Technical Insights: Identity and Security Considerations for Mobility <i>Trent Henry</i>	13:30 – 15:00 TBC	14:00 – 15:00 Getting Access: SSO, Federation and Authorization Management <i>Gregg Kreizman, Ian Glazer</i>

national author and an expert on Organised Crime, Fraud, Identity Theft and Money Laundering

AGENDA GUIDANCE

To help you navigate the summit agenda, we've identified track sessions that match your experience level and information needs. Specific categories include:

MATURITY LEVEL

F Foundational: If you are at the early stages of your initiative, or are a newcomer to this space, these sessions will give you the necessary understanding and first steps.

A Advanced: If you are an advanced practitioner, these sessions are designed to take your initiative, or understanding, to the next level.

FOCUS

T Tactical: Sessions providing tactical information that can be used straight away, with a focus on “how to”, dos and don'ts, and best practices.

S Strategic: Sessions focusing on the strategic insight supporting the development and implementation of your action plan.

V Visionary: Sessions focusing on emerging trends, concepts, or technologies that will help you with your future planning and decisions.

PERSPECTIVE

B Business: Sessions geared toward business leaders, or IT professionals who need to understand the challenges and opportunities from a business, organizational, or cultural perspective.

IT Technology: Sessions that address technical concepts, details, and analysis.

TRACK A: Plan, Manage and Govern Your IAM Program

Best Practices for IAM Program Management and Governance

IAM initiatives need good program management and sound governance, but existing information security programs and governance frameworks may be incomplete. This session sets out Gartner's recommendations for IAM program management and governance, which typically build on and extend information security best practices in ways that address the more intimate relationship that IAM has with the business.

- How best can you establish an ongoing IAM program?
- What constitutes sound formal governance processes and functions for IAM?
- How can you ensure that the PMO and governance forums are made up of the right people?

Ant Allan

Ways to Achieve More With Less in Your IAM Program

In times of economic stress and uncertainty, organizations are being forced to be creative in delivering much needed solutions. IAM is no different. This session presents ideas on how to stretch your IAM euro to make the best impact possible with what you have.

- How can I be creative with IAM and related technologies?
- What have other companies done?
- How can I avoid making the situation worse?

Ray Wagner

To-the-Point: Job Security in Cloud Era: Will Jobs Stay or Vaporize?

Cloud is a transformational phenomenon that changes our businesses and our IT organizations. Will cloud transform IT workforce? Will it threaten people's job security?

- How cloud impacts IT jobs, security jobs specifically?
- Are all security markets (and respective jobs) created equally cloud-enabled?
- Which jobs will fail, survive, or prosper in the cloud era?
- What shall individuals do to keep, or evolve, or change their jobs in the cloud era?

Joe Feiman

Lessons Learnt (and Fingers Burnt) in IT Risk Management Practice

Risk management is more art than science. The best way to learn risk management is to practice it. And the risk management approach must suit the culture of the organization. This Town Hall session will allow delegates to share experiences, pitfalls and best practices.

- What are the challenges and realities inherent in finding the productivity/protection sweet spot?
- What are the risk management and assessment approaches and experiences amongst Gartner's clients?
- How to identify and avoid the common pitfalls?

Tom Scholtz

Selling IAM to the Business

One of the most elusive deliverables in IAM is the business justification for building IAM. How can IT create a coherent and believable story about why IAM is needed in the enterprise in language that the business can understand and accept? This is an interactive Q&A session.

- Is it possible to develop a return-on-investment statement for an IAM program?
- Who do I need to sell IAM to within the enterprise to increase chances of funding success?
- What should an IAM business justification have to be successful?

Ray Wagner, Earl Perkins

Developing a Strategic Vision for User Authentication

The increased range and variety of authentication methods and platforms now available means that there that there is likely a "best fit" authentication solution for every enterprise use case. But it is difficult for IAM and information security leaders to find that solution among the myriad options.

- What are the characteristics of a good authentication method?
- How do different use cases influence and constrain enterprises' choices?
- How can enterprises architect a sound authentication solution?

Ant Allan

TRACK B: Take a Pragmatic Approach to IAM Technologies

Get the Plumbing Right! Directories for Internal and Cloud Services

Buildings and identity management don't work well if the plumbing is not designed, deployed and maintained. Behind every shiny, new IAM program is a wilderness of directories, databases, synchronization events and trust relationships. If you don't sort out the plumbing your IAM system is doomed to failure. This presentation will dive into the plumbing and identify what works and what doesn't work when it comes to directories, whether they are at home or in the cloud.

- Why should we worry about the plumbing?
- How do I fix the plumbing without renovating the entire building?
- How can I future proof my plumbing?

Andrew Walls

Fighting Threats with Layered Security and Improved Identity Proofing

This session will look at internal and external threats against the enterprise and will delve into the layered security, fraud prevention and identity proofing approaches needed to mitigate these threats.

- What are the current and future attack vectors threatening the enterprise?
- What are the best practices for layered fraud prevention and identity proofing to protect account takeover and new account fraud? How do they fit into existing IAM processes?
- What type of layered security services are needed to stop external threats, such as phishing and malware based attacks, against employees and external users

Avivah Litan

To-the-Point: OTP Hardware Tokens: Going, Going... Not Quite Gone

OTP hardware tokens have been a staple user authentication method for more than 25 years, but are increasingly losing out to alternative methods in new and refreshed implementations. This session explores this trend and asks if the demise of hardware tokens is inevitable ... or not.

- Where are they used and what are the problems?
- What are viable alternative authentication methods?
- Will OTP hardware tokens make a comeback?

Ant Allan

Getting to SSO

The quest for single sign-on is the result of disparate identity silos, increased password related support costs, and user frustration. This session helps attendees make decisions regarding strategies and tools to achieve SSO.

- What are the forces driving enterprises to require SSO?
- How should organizations plan for and choose SSO approaches and tools?
- What are the market solutions, and which vendors and open source solutions can support different SSO needs?

Gregg Kreizman

Technical Insights: User Provisioning and Identity and Access Governance Fundamentals

User provisioning and identity access governance (IAG) technologies form the foundation of an identity management solution. In this session Gartner will provide a component description and architectural overview of these technologies. Gartner will also offer deployment considerations, insights, and best practices based on years of customer experience.

In this session participants will:

- Develop a basic understanding of provisioning and IAG technologies
- Gain insights into the integration touch points between provisioning and IAG
- Identify best practices for deploying these services

Ian Glazer

Consulting and System Integration (C&SI) and Managed/Hosted Services

The services market to aid IAM deployments is growing and expanding. Maturity of IAM products and services continues to make implementations easier, but complexity and compliance concerns continue to demand help in making IAM systems truly effective. IDaaS and outsourcing are also growth markets.

- What is the current state of IAM C&SI and managed/hosted service markets today?
- What are best practices in choosing these services?
- What is the future of IAM C&SI and managed/hosted services?

Earl Perkins

IAM At the Nexus of Cloud, Mobile, and Social

Enterprises must manage identity in an increasingly hybrid world in which legacy on-premises IAM infrastructures are extended or replaced to support SaaS and mobile endpoints. Identities established on social media platforms are also being leveraged for enterprise system access.

- What issues must be addressed when applications are moved to the cloud, when endpoints are mobile, and social identities are to be leveraged?
- What are the traditional and emerging methods for resolving these problems?
- What are the current and emerging standards that support IAM, the cloud, mobility and social?

Gregg Kreizman

Technical Insights: A Magic 8 Ball in the Sky: Federated, Distributed, and Cloud Externalized Authorization

Externalized authorization has granted enterprise applications rich decision-making ability and ways of controlling who can do what with what kind of data. Although, identity management services have begun their inevitable migration to the cloud, authorization has lagged its peers.

- To what extent is externalized authorization becoming mainstream?
- What are the deployment patterns for externalized authorization with respect to cloud services?
- What are the challenges of federated authorization?

Ian Glazer

Technical Insights: To-the-Point: Privileged Account Management: Gaining Relevance in the Age of Virtualization

Privileged accounts remain a significant threat to the enterprise because they can result in denial of service attacks, unauthorized transactions, and data breaches. This session will explore the risks of these accounts and recommends approaches to keep your organization out of compliance "hot water".

- What threats do privileged accounts pose?
- How can/should organizations control various types of privileged accounts?
- How can organizations keep auditors happy?

Ian Glazer

Technical Insights: Making It Work: Identity and Mobility

Integrating mobile devices into the existing IT fabric — particularly IAM — is challenging, due to product maturity and increased complexity. Join us to explore the authorization, credentialing, and authentication interactions among mobile devices, IAM components, and mobile device management.

- What authentication methods are best suited to mobile computing?
- How can mobile computing best integrate with directory services?
- What opportunities will NFC (Near-Field Communication) provide?

Trent Henry

Good Authentication Choices for Smartphones and Tablets

The price and complexity of traditional authentication methods for remote access is more than just unpopular with users of smartphones and tablets; in many cases the platforms simply do not support robust methodologies. This presentation shows a path forward for making strategic decisions about mobile authentication and answers the question "who benefits from good authentication?".

- What security and privacy criteria are most urgently at risk in mobile computing?
- Case Studies: What will good authentication method for smartphones and tablets look like in 2017?
- Which vendors and technologies will provide the best future for mobile identity management?

John Girard, Eric Ahlm

Identity Intelligence or Employee Surveillance?

Expansion of identity into cloud platforms provides enterprises with unparalleled opportunities to develop a more complete understanding of the services their users access, where they are when they access a service, and how they use those services. In other words, IAM gives us new abilities to spy on our users. This presentation will take a candid look at the promises and perils of identity intelligence with an aim to keeping you out of jail.

- What is identity intelligence and how does it relate to user monitoring and surveillance?
- How can you derive benefits from identity intelligence without creating more risks for yourself and your enterprise?
- Should I be worried? How can you use identity intelligence and prevent malicious outsiders from gaining identity intelligence about your employees?

Andrew Walls

TRACK D: Complement IAM with Security and Risk Management

Dealing with Advanced Threats and Targeted Attacks

Today's attacks are stealthy and targeted to steal critical data or compromise specific accounts. Organizations need to present a hard target to an attacker, implement shielding to protect systems and applications and get better at threat and breach detection

- What are the security risks and challenges associated with advanced threats, consumerization, and mobility?
- How can IT security organizations find and fix vulnerabilities before they are exploited and also detect targeted attacks and breaches?
- How can IT security organizations protect applications and data from advanced threats while meeting business data access requirements?

Mark Nicolett

Bring Your Own... 4G: How Secure Are the Mobile and Wireless Networks You Use for Business?

When authenticating on wireless and mobile networks business users must have an understanding of where the risks lie for data exposure.

Adopting some best practices to avoid these risks can be beneficial for the organization. Moreover, broadband wireless and mobile networks can empower mobile security solutions on top of the network.

- What are the ways in which mobile and wireless networks create security and privacy risks?
- Which best practices will mitigate mobile security risks?
- How can emerging mobile networks be leveraged as security enablers?

Dionisio Zumerle

Enabling Mobility Securely By Protecting Mobile Applications On Smart Phones and Tablets

Organizations are implementing ways to protect mobile devices. Enabling applications on corporate or employee-owned devices remains, nevertheless, a major mobile security issue.

The presentation will talk about the major trends in mobile application security.

- What are the major risks and challenges concerning the use of mobile applications?
- How will mobile identity be used to determine access rights to applications and data?
- How can corporate applications residing on mobile devices be protected and enabled?

John Girard, Dionisio Zumerle

User Activity Monitoring for Early Breach Detection

Early detection of targeted attacks and security breaches has never been more important and more difficult to achieve. User activity monitoring is key to early detection of targeted attacks, and has become part of the standard of due care for a variety of regulations across all industry segments.

- What are the security and compliance drivers for user activity monitoring?
- How can SIEM and other monitoring technologies be deployed for early detection of internal and external threats?
- Which SIEM vendors are best suited to particular monitoring use cases?

Mark Nicolett

Dealing with APTs – a Best Practice Review of Coping with Advanced Persistent Threats

APTs can affect organizations of any size. Hackers use social media and other readily available information about individuals in order to make their one-off attacks successful. Handling APTs in your organization requires more than the addition of new controls, it requires a focus on security and threat detection to be added to the overall security program. This session will discuss the different approaches organizations are taking to handle APTs and advice from Gartner on the best practices in policy, operations and technology selection to stop APTs from affecting your organization.

Eric Ahlm

Technical Insights: Identity and Security Considerations for Mobility

This session explores the intertwined requirements for security, data protection and IAM. The options for managing the risk associated with mobile devices' storage of and access to sensitive information and applications is described and analyzed for their impact on the mobile strategy.

- Control options for sensitive data on mobile devices
- The extent to which identity controls can be incorporated into device protection
- The relationship between security, device management and application architecture

Trent Henry

INTERACTIVE SESSIONS

Limited Availability – Book Early

Roundtables and Workshops are restricted to a limited number of participants and are available to end users only. Attendees will be accepted on a first-come, first-served basis. Reservations can be made through the online Agenda Builder tool.

Analyst-User Roundtables

These topic-driven end-user forums are moderated by Gartner analysts. Learn what your peers are doing around particular issues and across industries (preregistration required).

POWERFUL TOOLS TO NAVIGATE MANAGE AND DECIDE

To get the most out of your Summit experience, we've created a range of tools to help you manage your goals and objectives of attending.

Access and manage your conference agenda, when and where you need to — Agenda Builder and Gartner Events Navigator Mobile App

Agenda Builder Customize & Manage Your Conference Experience

Time is a critical resource. And managing it well throughout the event makes a huge difference. So it makes sense to schedule and organize all your sessions and activities with Agenda Builder — your online conference organizer. Use it to create and customize your very own conference curriculum, in synch with your needs and interests. Agenda Builder gives you the ability to organize your time at the conference around these essential criteria:

- Date and time
- Track
- Analyst/Speaker profiles
- Session Descriptions
- Session Types
- Key Initiatives
- Vertical Industries

Plus, you can access your agenda on the go via ab.gartner.com/iame7

Gartner Events Navigator Mobile App

Manage your agenda anytime, anywhere with Gartner Events Navigator

- Get up-to-the-minute event updates
- Integrate social media into your event experience
- Access session documents and add your notes
- Available for iPhone, iPad and Android

Event Approval Tools

For use pre-event, on-site and post-event, our Event Approval Tools (formerly Justification Toolkit) make it easy to demonstrate the substantial value of your Gartner event experience to your manager. They include a customizable letter, cost-benefit analysis, top reasons to attend and more.

Visit gartner.com/eu/iam for details.

About Gartner

Gartner is the world's leading information technology research and advisory company. We deliver to our clients the technology-related insight and intelligence necessary to make the right decisions, every day. Our pivotal advantage: 890 analysts delivering independent thinking and actionable guidance to clients in 12,400 organizations worldwide — the majority from the Fortune 1000 and Global 500. This extensive body of knowledge, insight and expertise informs all of our 60+ events around the world. You simply won't find this unique quality of content at any other IT conference. Why? Because no one understands the impact of technology on global business like we do.

No need to take notes

Missed a session? Have no fear. Your ticket includes keynotes and track sessions — not just those you see live! Gartner Events On Demand provides streaming access of recorded presentations to all paid attendees for one year. Watch your favorites again and see those you missed from any Web-connected device. Visit gartnereventsondemand.com.

SOLUTION SHOWCASE

THE TEAM ATTENDANCE EFFECT: LEVERAGE MORE VALUE ACROSS YOUR ORGANIZATION

Knowledge creates the capacity for effective action. Imagine the impact on your organization when knowledge multiplies: common vision, faster responses, smarter decisions. That's the Gartner Team Attendance effect. You'll realize it in full when you attend a Gartner event as a group. Maximize learning by participating together in relevant sessions. Split up to cover more ground, sharing your session take-aways later. Leverage the expertise of a Gartner analyst in a private group meeting.

Team Benefits

- Team meeting with a Gartner analyst (end users only)
- Role-based agendas
- On-site team contact: Work with a single point of contact for on-site team deliverables
- Complimentary registrations
