## Attend these special sessions:

### The Gartner IAM Magic Quadrants

This presentation will introduce and discuss the three Gartner Magic Quadrants that cover Identity and Access Management technologies: Enterprise Single Sign-On, User Provisioning, and Web Access Management.

### A5: Identity Access Management Project Management Panel

**Ryan Miller, Senior Manager, IT Audit, Chrysler Financial**  
**Randy Hulse, Vice President in Internet Security and Timothy Moore, Enterprise Architect, Diligent Enterprise, Inc.**  
**Moderated by Roberta Witty, Research VP, Gartner**

This year, we will dive deeper into the management and technical activities involved in the implementation of an identity management project. At this session, you will here the success stories and lessons learned by private and public sector organizations in tackling these types of projects.

### B5: Developing Business Support for your Identity and Access Management Program

**Mark Thompson, Director of Enterprise Architecture, Enbridge**  
If the best way to get business value from your Identity and Access Management (IAM) program is to get strong and sustained business support, why are so many IAM programs still run as technology initiatives? Mark Thompson, Enbridge's Director of Enterprise Architecture, will share the innovative approach used to develop and maintain business support for the Identity and Access Management program in a growing and dynamic Oil and Gas company.

### C5: Identity 2.0, Internet Identity and User Centric Identity... Getting Past the Hype

**Gregg Kreizman, Research Director, Gartner**

Vendors are positioning new technologies and enhancements to existing technologies as revolutionary changes to the ways enterprise users and consumers identify and authenticate themselves. The promises are broad and far reaching. Vendors' approaches vary between lightweight and insecure to heavy duty, full featured, but difficult to implement. Adopting these personal identity framework technologies can be beneficial for your customers and your business, but at what cost? Find out in this session.

### Technical Trends, Issues and Identity

**Larry Magid, Journalist, Author and Internet Safety Advocate,** looks at the end user side of identity theft and access control. What do end users expect, what is the responsibility of companies and agencies and how can end users can be assured that their information is safe? Or is it mainly a matter of setting expectations? Professionals have a big role to play, but how far are end users willing to go to protect themselves?

## Plus:

### Solution Showcase

Meet over 40 world class identity and access management solution providers and find out how they can help you solve your identity and access management issues. This is your opportunity to evaluate new identity and access management solutions.

### Solution Provider Sessions and Case Study Presentations

These sessions are presented by leading solution providers and focus on best practices, strategies and solutions. These sessions are ideal for conducting product or service comparisons or analysis.

### Solution Showcase Reception

Join us for a cocktail reception on Wednesday evening and get the opportunity to network with peers and identity and access management solution providers in an informal setting.

### Hospitality Suites

Hosted by Platinum sponsors, these evening theme receptions are ideal for informal networking.

The Identity & Access Management Summit 2007 is sponsored by Gartner, which reserves the right, in its sole discretion to limit or deny access to the event to any entity or individual.
